SUNTEGRA™

SOLAR *with* STYLE

INTEGRATED SOLAR TECHNOLOGY

SunTegra™ brings together beauty and substance in a low-profile, roof-integrated solar roof system.

Rooftop solar has been around for decades. Despite its reliability and proven performance, rooftop solar panels have always been an *addition* to the roof – an addition that most homeowners find, well... not very attractive.

SunTegra solar roof systems by IST solves the dilemma of wanting solar for the positives without having to compromise on the aesthetics. A SunTegra solar roof system integrates into the roofline instead of being mounted on a rack system over the roof, generating solar electric power while also acting as a protective roofing material. Easy to install, industry proven, and attractive, SunTegra offers homeowners the traditional benefits of solar without the traditional "look" of solar!

SUNTEGRA™

SunTegra solar roof systems simply and seamlessly integrate into the roof, providing a sleek, low-profile appearance.

Traditional Solar

Traditional solar panels mount on racking systems on top of the roof, creating an “add-on” appearance.

REDEFINE *your* ROOF

SUNTEGRA™ SHINGLE

SunTegra Shingle solar roof systems are attached directly to the roof and integrate with composition shingles and other low profile roofing materials, providing a sleek seamless appearance. Designed with high performance, proven crystalline solar technology and tested to stringent solar and roofing requirements, SunTegra Shingles provide performance and durability all in one.

Unlike conventional rack-mounted systems which sit above the roof, SunTegra Shingles are the roof! Therefore you save double – no need to pay extra for roofing material under the solar system and no need to pay to remove and replace the conventional solar panels when it is time to reroof your home.

Low-profile appearance

SUNTEGRA™ TILE

SunTegra Tile solar roof systems integrate seamlessly with standard flat concrete tile roofing systems, enabling them to blend right into a home's roofline. Designed with rugged, durable materials, proven high performance crystalline solar technology and a unique ventilated design, SunTegra Tiles not only look great, but also offer dependable performance. Unlike conventional solar panels which are mounted above the roof and require expensive roofing tiles underneath, a SunTegra Tile solar roofing system will reduce your energy bills and your roofing costs – all while preserving your home's curb appeal.

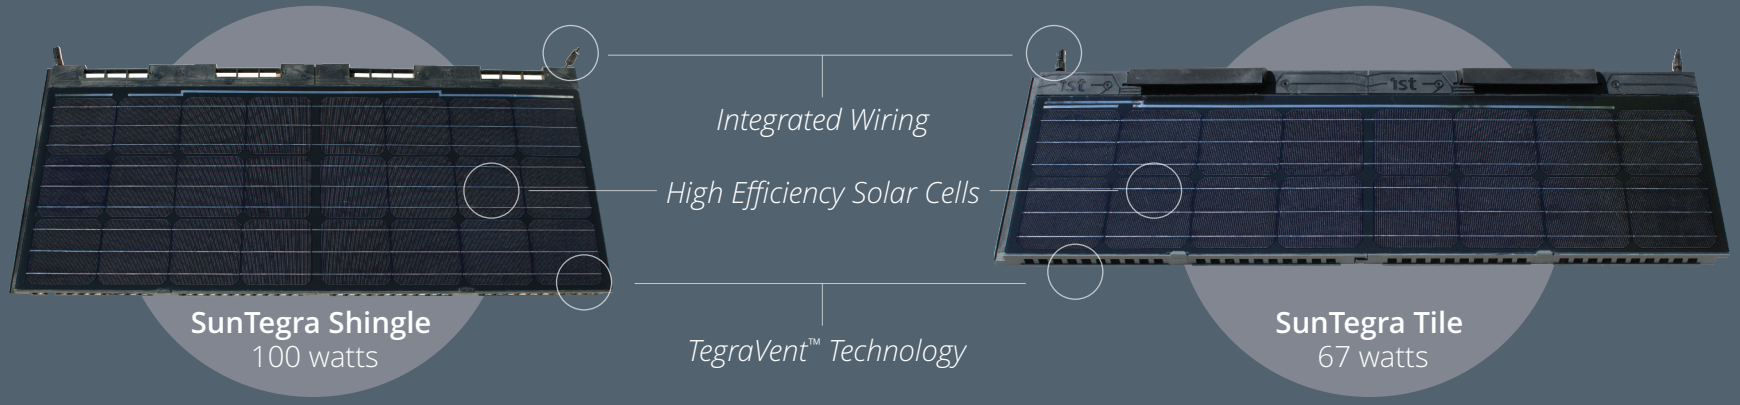

Blends into your roofline

The SUNTEGRA™ Advantage

Style with Substance...

SunTegra goes beyond good looks...

High Performance: SunTegra uses high-efficiency monocrystalline solar cells and a unique ventilated design to ensure premium performance. SunTegra outperforms other integrated roof products in terms of key energy production (kWh/kWp) metrics.

Added Value and Savings: SunTegra offers all of the economic benefits of standard solar products - significant savings on your monthly electric bill, protection against higher electricity rates in the future, and system cost savings from federal, state, and local incentives - *plus* additional roof savings and higher home resale value because SunTegra functions both as a solar panel and a roofing system.

Reliability and Safety: SunTegra products are designed with reliability and safety in mind. Based on proven solar technology and materials and tested to extensive solar and roofing standards, SunTegra products offer exceptional wind, snow, and fire ratings, and a "Best-in-Class" solar warranty. Also, unlike conventional rack-mounted systems, all connections and wiring are protected from wind, snow and rodents for additional peace of mind.

Innovative Technology: SunTegra incorporates many unique features that differentiate it from conventional solar panels and other roof-integrated designs, including an innovative TegraVent technology to enhance energy performance and a unique integrated wiring design, locking connector system, and welded junction box connections for easier installation and electrical safety.

Simple and Easy Installation: SunTegra's lightweight design and integrated wiring reduces complexity and increases speed of installation. SunTegra systems install in half the time and with 50% fewer parts than conventional rack-mounted systems.

SUNTEGRA™
SOLAR ROOF SYSTEMS

The Perfect Combination of Aesthetics, Performance, and Value

At IST, we know that putting solar on your home is a big decision, so we have taken care to design specialized products that offer home-owners a simpler, sleeker, and more efficient way to go solar with all the economic and environmental benefits of traditional solar.

At IST, we also know that your time matters. We and our network of dealers are dedicated to designing and installing the most optimal system for your home in just three simple steps:

1. **System proposal**
2. **Installation**
3. **Activation**
