Contractor Referral Service

HRN of Seattle Inc is greater Seattle's sustainably focused, local contractor referral service.

We are personally and professionally invested in connecting homeowners to screened green contractors for all home improvement, remodel and construction needs. In addition to screening our contractors diligently, we gather information from contractors and their references about their green building practices, experience, qualifications and interest.

We are fortunate to work with many of Seattle's finest eco-minded contractors and we would be happy to introduce you to the right contractor for your needs. Best of all, we are a FREE service.

Membership Information

See page 92 in this **Green Pages**,
online at www.ecobuilding.org, or
email membership@ecobuilding.org.

Welcome to the 2009 edition of the Green Pages. In this directory of Northwest EcoBuilding Guild members, you will find a wide range of professionals who practice designing, building, supporting, and maintaining environmentally friendly buildings and landscapes. If you are planning to remodel or build a new home or office in an environmentally responsible way, with these Green Pages, you can assemble an entire team of Guild members—all of whom share similar values, and many of whom have worked together before. You can find a real estate professional who can help you locate an appropriate site, a mortgage broker who can help you arrange a green loan, a building designer well-versed in the use of recycled materials, a landscape designer who works with native planting, a contractor familiar with the newest healthy finishes, a supplier who stocks all the eco-products needed and a low-toxic cleaning service to spruce up afterwards. They are all here—and more!

Members of the Guild are nationally and regionally recognized leaders in their fields. In addition, our numbers include passionate newcomers and interested homeowners. The wonderfully varied interpretations of sustainable design and building by our professional members will satisfy a wide range of clients' values and ideals, programs and budgets, desired styles and features—from yurts and owner-built straw bale structures to energy-saving mixed-use and small commercial buildings.

The Northwest EcoBuilding Guild is a non-profit educational organization focused on creating environmentally responsible residential and light commercial buildings. Through its member-based programs, publications, chapter meetings, and networking opportunities, the Guild helps both its members and the general public to implement sustainable building technologies. These technologies include source reduction, low toxic construction, energy efficient structures, efficient use of materials and processes, and job site recycling. Together, we are advancing regional building practices that foster human health, resource conservation and long-term economic vitality.

The Guild maintains chapters in six Northwest cities to carry out this mission. Please refer to the first page of your Region for details on monthly meetings in your area. You will find information about membership benefits on page 92 to help you become an active Guild member today, and benefit from this important environmental movement.

On the Cover

1. Ajbour Oasis addition. Stuffing the cracks at Seattle's first permitted straw bale structure. Designed by S.A.G.E. Designs NW Architecture Studio, Built by RA Construction.
2. This Healthier Home was built within strict air quality and non-toxic specifications in Oregon's Fairview Village, as a charitable project for the American Lung Association. Cecil Smith Construction.
3. FSC logo – this edition of the Green Pages is printed on FSC-Certified recycled content paper.
4. The Garg Single Family Residence in Kirkland features, passive solar heating and cooling, active radiant heating, superday lighting to minimize electrical load, cross ventilation in every room, every room in the house has direct access to a landscaped exterior space, green roof on flat roof, carport in lieu of garage, recycled finish materials abound. Verge Architects.
5. Chris Stafford Architects. Chris' own Environment Friendly House is a small "sustainable" house in Port Townsend, Washington that challenged its owners to downsize, while not requiring major life style changes. Photo features stairs linking basement, first and second floors uses FSC certified and reclaimed lumber treads.
6. Mom's Pharmacy project on Capital Hill in Seattle, by Irons Brothers Construction, features lighting controls: occupancy sensors & lighting timer controls throughout the pharmacy and office spaces, programmable thermostat, all smooth wall ducting used throughout the space, Energy Star appliances, recycled-content tile.
7. Home Resource Network contractors built this home using structural insulated panels (SIPs) and insulated concrete forms (ICFs) for maximum energy efficiency. Sustainably harvested bamboo flooring from a socially conscious manufacturer and cabinetry made of fast-growing eucalyptus. Low-emitting adhesives were used.
8. Thomas Residence, Chris Stafford Architects designed and assisted in the construction of the first two permitted load-bearing straw-bale structures in Washington State.
9. NW Bloom – Ecological Landscapes - This smart landscape features no impervious surfaces, mostly native plantings, zero lawn, and locally quarried stone.
10. Nickel Bros. House Moving, Ltd. saved this Madison Park House by moving it to a new location across Lake Union in Seattle.
11. Gayken Reinsence, located south of Spokane, features load bearing straw bale construction, radiant heat, and a living roof. Built by Lake City Contractors LLC, plastered by Ragged Ridge Concrete Placing, Photo Karen Allen, Bella Art Gallery.

A Message from the Guild Board of Directors

Greetings and welcome to the 2009 Edition of the *Green Pages*, the official directory of professional members of the Northwest EcoBuilding Guild. 2008 was a very exciting year for the Guild, and we plan an even greater year in 2009. Our membership numbers continue to increase, and we have new chapters forming in key locations. A visioning session was held in April of 2008 to set the stage for the future, and our annual member retreat in October included breakout sessions to refine our strategic plan to take the organization to an exciting new level of education and influence.

The Northwest EcoBuilding Guild is an alliance of builders, designers, suppliers, homeowners, and partners concerned with ecological building in the Pacific Northwest. A vital organization, our mission is to provide leadership in education to transform the built environment and build a sustainable society. We work to build local living economies, safeguard the ecological diversity of our bioregion, and champion human health and community. Mitigating Climate Change is the central challenge of our time. Throughout its educational activities and partnerships, the Guild promotes buildings that dramatically reduce carbon emissions.

A great shift is upon us, and our members are leading the way toward a new ecologically just economy. Many have years of on-the-ground practical experience with creating a sustainable built environment, and are forwarding this new paradigm in their professional lives every day. Our renewed vision and strategic plan recognize this collective knowledge and our responsibility to pass information on to the next generation. Our roster includes many recognized environmental leaders, and continues to grow both with people who have been walking the talk and are

now connecting with us, and with interested newcomers.

This past year, the Guild entered into an agreement with Institute for Washington's Future to apply for a variety of grants. These grants will fund administrative positions to allow our organization to grow and be more effective, to update our website and institutional knowledge banks, and to develop targeted educational programs to inform both emerging and established designers and builders on methods of reducing building energy usage by 60% in just a few short years, and reaching the Living Building Challenge established by Cascadia Green Building Council (GBC).

The Guild's Regional Board is an umbrella organization that embraces, supports, and connects the regional work of the Guild's chapters. The geographic extent of each chapter is far reaching, with active organizations in Seattle, Olympia, Portland, Eugene, Ellensburg, and Spokane. Renewed energy in Skagit County and Upper Olympic Peninsula promise active chapters there soon as well. Each chapter hosts meetings, workshops and regular educational events that allow members and the public to get involved at a local level.

The Guild started as a grassroots organization in the Northwest, and continues to be true to its lineage. We are determined to stay on the leading edge of new and re-emerging green methods and materials, and continue to educate others in the community about truly sustainable choices in residential construction and community building, as green building continues to expand and becomes standard building practice.

This 2009 Green Pages is available online as a searchable database of regional services and products, and also

downloadable from our web site, www.ecobuilding.org. We hope you think of this publication as your *green* building resource in the northwest, and pass on the knowledge you learn to others searching for a more sustainable way to build.

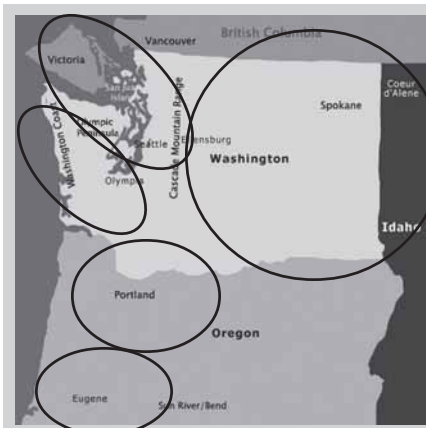

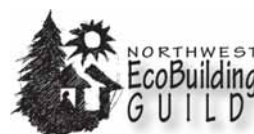

At the beginning of each Regional Section you will find a list of chapter representatives. We hope you will contact one in your area, or one of our Board members, to learn more about how you can become involved in bringing our shared mission to life. Also be sure to visit us on our website for regular updates on future Guild events and examples of our member projects.

Thank you for your support!

New listings format for the 2009 Green Pages

To help readers find local builders, designers, suppliers, and other green service providers, we have separated the listings into four regions:

Olympics - Includes the Olympia area and the Olympic Peninsula

Inland NW - Includes the chapters east of the Washington Mountains, the Spokane area, the Ellensburg area, and Idaho

NW WA - Includes the Seattle area and northern Puget Sound area into BC

Oregon - Includes the chapters in Oregon, the Portland area and the Eugene area

Leadership, contributions, and passages

On what appears to be the eve of a global environmental transformation, Guild members continue to set the pace necessary if we are to succeed at slowing the rapid rate of climate change, or making headway in global resource conservation. We carry on as a springboard for early-adopters and newcomers alike to initiate this transformation at every stage of sustainable community development.

As early-adopters of sustainability, the Guild has demonstrated leadership in many areas and “walks the talk” wherever we can. For the first time this year, the *Green Pages* are printed on Forest Stewardship Council (FSC)-certified recycled content paper. We wanted our long-standing commitment to sustainability to come full circle and ensure that all of our commitments are aligned with our core values. Using paper that comes from FSC-certified sources allows us to continue our progressive leadership in all things sustainable.

With our commitment to sustainability our Board of Directors and the membership have begun a conversation about the continuing publication of the *Green Pages* in its print format. Many in our organization believe that a true commitment to sustainability would encourage us to discontinue our resource-intensive publication. Others believe that our mission to reach the greatest number of people with our message of sustainable development is just beginning and that the print edition of the *Green Pages* continues to serve as the best possible method for that outreach. If you have a strong opinion on this matter, either way, please email us at greenpages@ecobuilding.org to share your thoughts as we wrestle with this important decision.

Speaking of commitment and leadership, I recall how I began the “Letter from the Editor” in the *Green Pages* just last year primarily as an instrument to honor Tom St. Louis, founding Board member, who had passed away in 2007.

Regrettably, I must continue this tradition in 2009 to honor another important member of our organization, Chris Stafford of Port Townsend, who passed away in 2008. Chris was an original member of the organization and integral contributor in the early years. He served as President of the Board for many years, contributing his time, his talent, and his undying commitment to sustainability. He will be missed, but never forgotten.

Remembering Chris Stafford	93

Many, who knew him professionally, might not have known that Chris was also an accomplished artist. Every artist leaves an enduring legacy and Chris’ is no exception. To honor his enduring contribution to this organization and his passion as an artist, our memorial page is comprised of one of his beautiful art pieces, please see page 93 to share in Chris’ joy and contribution to sustainability and art.

Finally, as I ponder passages, I would be remiss if I were not to acknowledge Terry Phelan of Living Shelter Design and Ben Kaufman of GreenWorks Realty,

for their leadership and commitment as co-presidents of the Board of Directors, who are both stepping down following their tenure on the Board.

Thank you, Northwest EcoBuilding Guild

Can High Tech Equal High Environmental Impact?

By Jennifer Griffin, Architechtronics

Advances in home control systems have made it easier for automatic controls to operate lighting, regulate temperature, monitor irrigation, and manage energy use. The result is a home that functions to promote optimum comfort, while conserving money, energy, water, and time.

Green Building products and strategies built into a home are just the first step. How we use, operate, and maintain these features as we live in the home also contributes to the total package of environmental benefits and ensures that these designed benefits fulfill on their environmental promises.

Lighting Control Solutions.

CFL or LED bulbs and fixtures and motion sensing solutions are always a great place to start to provide smart lighting solutions. With a home control system, the lights can respond based on time of day,

occupancy of the home, or be adjusted manually when needed.

Temperature Control Solutions.

The downfall of simple programmable thermostats, is that they are based singularly on time of day, and do not account for other variables, such as the homeowner occupancy or schedule changes. With an integrated thermostat, the home control system will set things right, even when you forget or plans change. Settings will automatically adjust based on events, time, or sensor (water, humidity, or temperature) readings. If you forget to tell your system you are on vacation, a simple phone call or log-in via the Internet allows for easy remote access.

Automated window coverings can automatically close to avoid solar gain in the summer, or be left open to take advantage of rare sunny days in winter. The system can also automatically turn off the air conditioner or heat when a window is opened, and turn itself back on when all windows are closed.

Smart Irrigation Solutions.

Water sensors determine whether it has rained the last 24 hours, and report to the home control system on whether it is necessary to turn itself on or to skip its programmed cycle for the day altogether.

Energy Management Solutions.

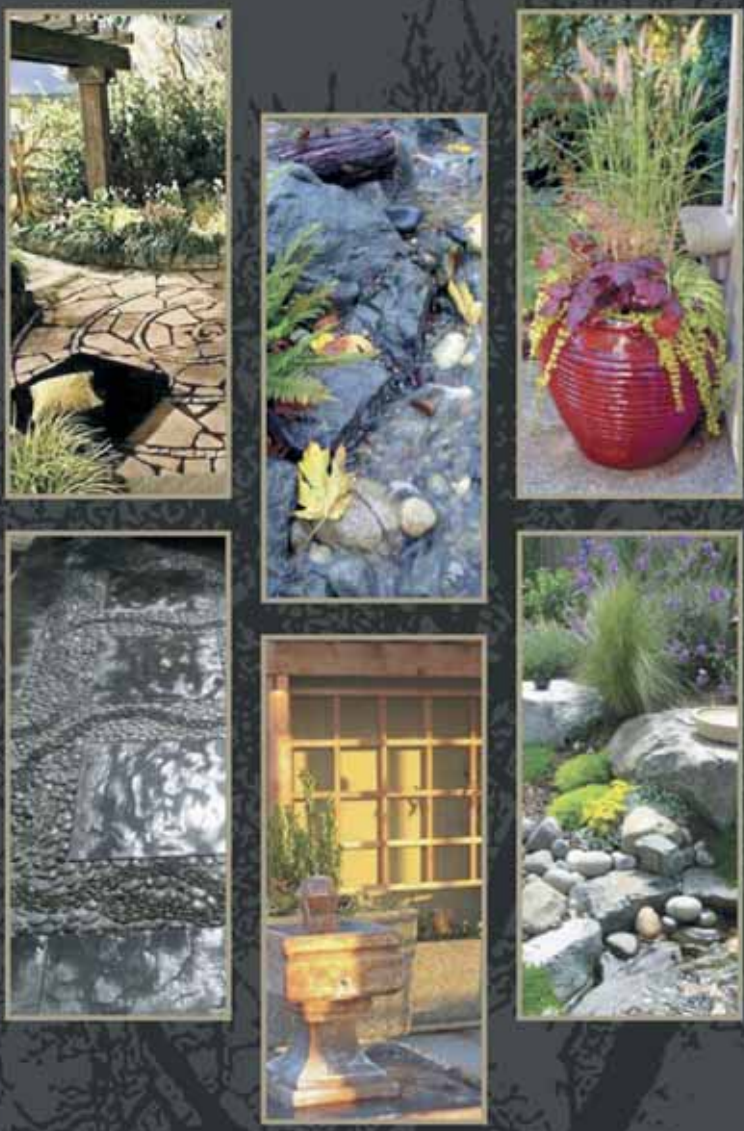

Energy management begins with controlling phantom loads - the amount of energy used by electronic equipment when they are not in use, but still plugged in. If you are buying new products, choose models that offer low power consumption when in stand-by mode to reduce phantom loads. If you are working with an existing array of electronics, find out which ones are drawing the most power. The good news is that many manufactures are focusing on lowering phantom loads. Also, your local home technology company should be able to test your current equipment, and let you know the annual cost of operation.

Build Green, Save Green

Green homes are available in every price range, but they don't need to cost more than conventional homes. Greenbridge is one of the many affordable housing projects in our region that make Built Green® a national leader in certifying green affordable housing. In addition to being affordable, a Built Green home can also save you money. Energy and water conservation, durability...these are dividends you'll receive month after month in lower utilities and maintenance.

Olympics

South Puget Sound Olympia, WA

Our active chapter is growing and going strong. Dates, programs, and times for meetings and other special events are posted to our South Puget Sound Chapter website at www.ecobuilding.org. Meetings begin at 6:30 and end promptly at 8:30. Socializing is before and after the meeting. Please join us.

Chris van Daalen, President

360-789-9669

cvan@theverdantgroup.com

Olympic Peninsula Chapter Port Townsend, WA

The Olympic Peninsula Chapter has been making a concerted effort to reach out to other professional, educational & local community organizations involved in sustainable design, construction & planning industries to share what has been learned about ecological sustainability and resource efficiency in our homes and places of work. The chapter is looking to form a new steering committee. If you are interested, please send an email to the Guild President.

Guild. An association of persons of the same trade or pursuits, formed to protect mutual interests and maintain standards.

Homes! Not bikes...

We are a small homebuilding company that builds energy efficient, beautiful houses. We build one house at a time with an emphasis on craftsmanship and using materials that come from sustainable sources. We have 13 years of experience with modern green building methods and are striving towards building homes that produce more energy than they use.

Polar Bear Construction is a small company that has been building custom homes and providing services for residential remodels and additions since 1987. For the past 20 years, one of our main goals has been to offer customers opportunities to incorporate "Green Building" technologies and materials into their project. During the last three years we have built award winning homes as well as "the greenest house in Thurston County". Visit our web-site!

Since 1983 our goal has been to provide the community with affordable energy efficient housing. We have been able to achieve this goal by concentrating on heating, ventilating,

and insulating the structure. We are experts in HYDRONIC RADIANT HEAT FLOORS, and STRUCTURAL INSULATED PANEL (SIP) CONSTRUCTION. We have been so impressed with the SIP's as a building material that we have committed to build with it exclusively for the past 12 years. Controlling the building envelope with SIP's penetration sealing, and superior ventilation coupled with radiant heat. Our customers save an avg. of \$20/mo. to heat their home. If you need help designing a green built home or advice on building with SIP's please give us a call.

ShelterWorks manufactures Faswall® wall-forms (made of 85% recycled woodchips and 15% cement). The wall forms dry-stack to build a wall with high insulation value and exceptional thermal mass. Structures can be built quickly and easily. The cells of the wall form are filled with cement and rebar to form a reinforced concrete grid surrounded by breathable, insulative wood chips. ShelterWorks staff can assist clients from the initial design and engineering through to installation.

e-mail: info@windfalllumber.com
web: www.windfalllumber.com
Windfall Lumber supplies sustainable flooring, moulding, countertops, beams, and hardwoods. Our specialty is flooring, moulding and decking made from reclaimed Pacific Redwood and Douglas Fir vinegar tanks. The tanks, approximately 80-90 years old and now dismantled, offer clear Fir and Redwood up to 26 feet in length. We also sell FSC certified wood, local or urban salvage wood, and OS Hardwax Oils. A low toxicity penetrating oil that is the leading floor and moulding finish in the green building industry. Buy from Windfall Lumber and know where your wood comes from.

510 Interiors in downtown Olympia offers homeowners, facilities managers, businesses and builders an exciting local, green alternative for interior design. The showroom displays "green" products: ceramic, hardwood, or cork flooring, countertops, custom cabinets, and wool carpets. It also provides planning space for new construction or an innovative remodel. Our interior designer is available for residential and commercial projects. Installation is available. 510's philosophy: Live Well: Live Green incorporates the values of our South Sound community.

web: earthdwell.com
Earth Dwell Ltd. specializes in the design and construction of stabilized-insulated rammed earth. This combines the benefits of rammed earth with seismic stability and thermal efficiency to produce walls of unparalleled performance and beauty. Warm, durable, non-toxic and essentially maintenance free, rammed earth creates a high mass structure with long term advantages over other wall systems. This is an ancient technology built from sustainable materials with modern techniques. NAREBAmember.

Rainwater catchment by The Stone People

Rainwater Catchment-Functional Beauty

by the Stone People,
Todd & Kari Harris

Just one inch of rainwater falling on a 2,000 sq ft roof can accumulate 1,250 gallons of water.

Every living thing needs clean, fresh water. However, 97.5 % of the water on our "blue planet" is saltwater. 2.5% is freshwater, in various states. 1.5% of our freshwater is frozen in polar ice caps, humidity in the atmosphere or in the ground returning to aquifers. This leaves only 1% of freshwater available for biota.

Unfortunately, the build environment is rapidly degrading the quality and quantity of fresh water. Urban runoff is the number one cause of water pollution. In 2002 the EPA reported that 45% of stream miles, and 47% of lake acres were not suitable for swimming or fishing. The good news is you can capture, cleanse and reuse your runoff.

By capturing rainwater on your property, you can filter it, store it, and return it, as needed, back to the site. Plants prefer rainwater, and irrigating your landscape with rainwater will reduce the strain on municipal systems.

What exactly is a rainwater catchment system? What does it look like? Rainwater catchment systems can take many forms, some simply look like a water feature, others collect rainwater and store it in a cistern or rain barrels. Site-based systems could look like an elegant ceramic urn, or a specimen stone column. It could take the shape of a creek, waterfall or even a pond.

Rainwater recycling systems combine the beauty of a water feature with the functionality of a cistern and have many advantages over traditional water storage systems, including aesthetic appeal, water filtration and making water available to wildlife.

Rainwater recycling systems add beauty and value to your home in addition to the many intangible benefits such as relaxation and stress reduction. You can also earn LEED credits and Built Green® points when you have a rainwater recycling system as part of your site plan.

Each water feature is unique and custom designed for your home and objectives. This water feature can store up to 1,500 gallons of rainwater for later use.

The gutters from the home are connected to pre-filters to remove large debris. The pre-filters are connected to the rainwater storage basin. The captured rainwater is filtered by circulation, aeration, biofiltration and plants consuming toxins and nutrients from the water.

Inland NW

Inland NW & SE B.C. Chapter Spokane, WA

Through our Environmental Home Stewardship course and handbook, we provide tools to the larger community on sustainable living practices related to home, site, waste and daily energy use. Chapter Meetings are normally held monthly on the fourth Thursday of each month from 5 – 6 PM. See our chapter website for more details and chapter events and meeting locations.

Architects

Thomas W. Angell, Architect, AIA 509-747-7647

Thomas Angell
621 South F Street
Spokane, WA 99224-1831
e-mail: tom@tomangell.com
web: www.tomangell.com
Thomas W. Angell, Architect, AIA is an award-winning design firm specializing in energy and resource-efficient design. I offer a creative and diverse background to take on challenging opportunities, ranging from single family homes to community and government projects. By listening to your needs, I craft solutions that express your personality and the values we share as a community. Using natural materials like straw bale, wood, water and light, I sculpt spaces that engage your senses.

We work closely with you and your building site to design a cozy, sustainable home in harmony with nature. Using traditional forms and durable natural materials (strawbale, earth, stone and wood), we specialize in passive solar heating, daylighting, remodeling, and indoor-outdoor spaces. In 2005, our firm was named one of Natural Home and Garden Magazine's top ten green architects. With a short consultation or full architectural services, we help you craft the home of your dreams.

Sunrise Design Center focus began with passive solar design and education and grew to include environmental design and music. Education thoughtful service are primary. A new sense of community is growing electronically, spiritually, and sustainably. Information exchange is increasing exponentially, bringing new cultural literacy. Throughout our highly-interactive design process (residential and commercial), the client's space and lifestyle needs are viewed through various filters, including renewable energy systems, place, chi energy flow, and eco-friendly building materials. Solutions are appropriately refined to meet budget.

ShelterWorks manufactures Faswall® wall-forms (made of 85% recycled woodchips and 15% cement). The wall forms dry-stack to build a wall with high insulation value and exceptional thermal mass. Structures can be built quickly and easily. The cells of the wall form are filled with cement and rebar to form a reinforced concrete grid surrounded by breathable, insulative wood chips. ShelterWorks staff can assist clients from the initial design and engineering through to installation.

NW Washington

Central Puget Sound Chapter Seattle, WA

Central Puget Sound Chapter offers exciting monthly meetings focusing on cutting edge green building topics tailored for the design and building professionals. All events are open to the public.

On the 4th Wednesday of the month (Nov. and Dec. excluded), we have a great Green Building Educational Event at the Phinney Neighborhood Association (PNA), 6532 Phinney Ave N (Lower Building Basement Lecture Hall), in Seattle. It starts at 7 pm, goes 2 hours and is a great place to network. Our educational series is continually growing and changing, so check the most recent event list at www.ecobuilding.org/chapters/central_puget_sound.

Our small, Seattle-based firm offers a client-centered approach to design, viewing the process as a conversation between owner, architect, and builder. We focus primarily on residential additions, remodels, and new construction, and also work on small commercial projects. Concerned with creating sustainable dwellings, we value resource efficient building strategies, energy conservation, daylighting, and material selection as essential components in crafting a finished product that will be used and enjoyed for decades.

Making Your House Your Home As a design/build company, our focus is on helping you bring your home remodeling dreams to life. Whether you are adding on or need a new kitchen with extra room for friends, our goal is to ensure your home reflects your tastes and needs, and respects your budget. Offering both design and remodeling makes renovating your home not only more convenient, but more cost effective as well. Our team approach provides a project coordinator working as the team leader and client advocate from the beginning of design to completion of construction.

At Rockwood-Greene Co., building is the art of joining sticks and stones into something worthwhile, by putting your heart into the job. My name is Kyrie Jardin, the owner, and as for me, I love to create beauty, and revel in exactitude and order. I love complex projects that challenge the mind. I love the dance of efficient use of time and materials. I love helping others create their own home, weaving it out of boards, bricks and other fluff. Please consider calling us for your next project, if only to talk. Perhaps we can do business. References given on request.

Ecohaus

206-682-7332

4121 First Avenue South
Seattle, WA 98134
ph2: 800-281-9785
e-mail: sales@ecohaus.com
web: www.ecohaus.com

Since 1992, Ecohaus has provided
homeowners and professionals the best in
green building and remodeling supplies,
including certified wood flooring, dual flush
toilets, one-of-a-kind countertops and
premium quality, zero VOC paints that
outperform the top conventional brands.
Visit one of their stores in Seattle, Bellevue
and Portland. The company serves all 50
states online at www.ecohaus.com or by
phone at 1.877.4.ecohaus.

See my ad on page 3.

**Also listed under Healthcare/Enviro-
illness, Interiors & Furnishings,
Landscaping Materials, Painting &
Supplies**

Imagine the world if...

the whole world used sustainable
building practices

Ecohaus believes that by switching to
sustainable building practices the world
could stretch our natural resources further,
diminish the occurrence of many chronic
health problems, promote the growth of
local economies, and decrease the release
of harmful greenhouse gasses.

Since 1992, Ecohaus has been supplying
the Pacific Northwest with building and
finish materials that are based on a holistic
model of sustainability, incorporating
consideration for the Environmental,
Health and Local impacts of the products
we choose to carry.

When we think about the Environmental
impacts of a product we're looking at their
entire lifecycle from harvesting and
manufacturing, to performance and
longevity, through disposal (re-cycling,
repurposing or composting if
biodegradable.) We look for third party
certification, salvaged, or recycled
materials; we look for products that will be
durable and last a long time (many of our
materials will outlast their conventional
counterparts;) and we look for products
that can be easily diverted from the landfill
(our carpet tiles can be turned into more

carpet tiles, our decking can be turned into
mulch.)

When we think about the impacts of a
product on people's Health we look for
materials that are as low toxic as possible
for the people making the material as well
as the people living with it. Many adhesives
and finishes contain harmful toxins that can
cause poor indoor air quality and lead to
problems like asthma, allergies and "sick
building syndrome." We offer alternatives to
these products, and people feel a difference

When we think about the impacts that our
choice of products can have on a local
community we strive to find socially
responsible, sustainably minded companies
to work with. We look for products make it
possible for people to lift themselves up
while managing their resources responsibly -
for instance, we pay a fair price for wood
from certified forests to incentivize people
NOT to slash and burn their resources. We
work with family owned and operated
businesses. And we work with owner/
operators in the Pacific Northwest.

Imagine a world where we use materials
that we find close to home, where we keep
our air and waters clean, where our built
environment helps support our natural
environment - this is an "Ecohaus Future."

ShelterWorks manufactures Faswall® wall-forms (made of 85% recycled woodchips and 15% cement). The wall forms dry-stack to build a wall with high insulation value and exceptional thermal mass. Structures can be built quickly and easily. The cells of the wall form are filled with cement and rebar to form a reinforced concrete grid surrounded by breathable, insulative wood chips. ShelterWorks staff can assist clients from the initial design and engineering through to installation.

Clearwater Commons – Bothell LID development

Snohomish County has approved a unique project that has been three years in the making. The Clearwater Commons is the first project of its kind to use comprehensive low impact development methods, intentional community values, innovative green building techniques, and environmental improvements geared toward the restoration of North Creek, an important and endangered salmon habitat.

“Deep Green” is a term that signifies going beyond traditional green building methods and involves the long-term commitment to environmental values and action.

The Clearwater Commons is based on building a “deep green” community through a commitment to sustainable values in support of:

- Growth management through denser communities in urban areas
- Climate change through reduced carbon emissions and native plantings
- Salmon through the cooperative restoration of a ¼ mile of North Creek
- Education by engaging the community in cooperative learning by providing a model of how new communities can develop.

Electromagnetic Field Testing & Remediation

Since 1987, Earthwise Excavation has built a reputation for service, innovation, and workmanship. We also strive to follow the path of an evolutionary business with sustainable business practices. 100% Biodiesel, Biolubricants, Green power, Employee ownership, and 9% minimum net to area conservation programs. We offer a full range of Excavation and Septic system services. We sincerely hope we can be of service to you. More information on the web at <http://www.fromthegrounddown.com/>.
See my ad on left.

Also listed under Biodiesel, Septic Systems, Utility**Your Neighborhood's best kept secret.**

Since its inception in 1987, Earthwise Excavation has built a reputation for service, innovation, and workmanship. We also strive to follow the path of an evolutionary corporation with sustainable business practices, carbon neutrality programs, community and philanthropic involvement.

At Earthwise Excavation we feel strongly that businesses must take the lead by "inventing a future" that gives our children a chance to enjoy a healthy environment. Customarily business and corporate ideologies have viewed environmentalism as a threat to the bottom line. We regard the sustainability imperative as an opportunity to gain competitive advantage, reduce costs, increase employee and customer loyalty, and stimulate greater innovation while improving the health of both the planet and people. We also have discovered what may have been known - that it feels good to do good, and that doing good work enhances our company's success.

Biodiesel: tens of thousands of gallons used, massive amounts of pollution avoided. Plus Biolubricants, Green Power, FSC certified products, Nimh Power, 9% net to Conservation

Environmentally Friendly Excavation. Here at Green Tech we use the most advanced equipment available. We work with new CAT machinery which have Tier 3 and 4 motors, which leave the lowest carbon footprint. We also use vegetable base hydraulic fluids and bio diesel in our machines. We have a huge array of projects. No job is too small, please visit our website for more information.

The Department of Ecology is Washington's principal environmental agency. Part of our mission to "promote the wise management of our air, land and water for the benefit of the current and future generations..." involves supporting sustainable practices.

Ecology has developed the "Beyond Waste" plan of which one main priority initiatives is green building. We have staff in each office who can provide practical information, technical assistance, case studies, a web-based resource center and green building contacts in their region and across the state.

Please contact the staff member closest to you:

Liquid Heating provides the most energy efficient heating system. Radiant Panel heating is prevalent throughout the world and is the most widely used heating method because of its efficiency. Radiant panels provide a comfortable and effective heat that is typically 40% more efficient than forced air and in-floor systems. Liquid Heating also provides evacuated tube solar for hot water and complete installation of heating systems and evacuated solar tubes.

High Tech continued from p. 8

Try to eliminate the power-hungry standby modes of your electronics, such as microwaves, printers, gaming consoles or cable boxes, by cutting power to such devices when not in use.

Today, home control systems have made it easier than ever to integrate smart technology, without contributing to your

overall environmental footprint. Next time you leave home, simply touch a button – and allow your house to set its own security, turn off its lights, set back the thermostat, drop the blinds, and shutdown all equipment that has a large draw in standby mode. With home technology, you can make your home as green as you intended it to be.

Gaspar's is an award-winning contractor that specializes in remodeling older homes and condominiums in Seattle. Since 1973, Gaspar's has built a company culture that is centered on effective communication. We believe that fostering productive relationships with all involved in a project is the foundation for a successful remodel.

From the very beginning, we work actively to guide our clients through the process and make sure their dreams and budget are in harmony.

Wind Energy. Wind Turbine.

What picture comes to mind when you see or hear these words? Most people think of the 300 Foot tall airplane propellers. Small Wind Energy systems for residential and small commercial application come in many sizes and styles, are virtually silent, and can be very cost effective. Call us at 206-941-6654, or visit our web site at www.westseattlenaturalenergy.com to find out more about Small Wind Energy.

Studio Coop (studio kúp)

At Studio Coop we pride ourselves in helping
our clients turn their desires into exceptional
living experiences. Studio Coop brings an
understanding of ecology to modern living
by integrating energy efficiency and natural
and alternative materials in comfortable, well-
scaled environments. Whether it is a new
design with the clean, simple lines of
midcentury modernism or a remodel with
traditional detailing and craftsmanship, our
goal is to achieve simple, elegant design
solutions.

Windfall Lumber supplies sustainable flooring, moulding, countertops, beams, and hardwoods. Our specialty is flooring, moulding and decking made from reclaimed Pacific Redwood and Douglas Fir vinegar tanks. The tanks, approximately 80-90 years old and now dismantled, offer clear Fir and Redwood up to 26 feet in length. We also sell FSC certified wood, local or urban salvage wood, and OS Hardwax Oils. A low toxicity penetrating oil that is the leading floor and moulding finish in the green building industry. Buy from Windfall Lumber and know where your wood comes from.

Howard Thurston
1323 SE 6th Avenue
Portland, OR 97214
e-mail: ht_pe@earthlink.net

A "new paradigm" in the practice of engineering requires that a technically viable design solution cannot compromise the social, ecological, or economic health of any part of the world or its peoples. New Paradigm Engineering is committed to a holistic approach to civil and structural engineering that seeks to integrate these criteria into the engineering design process. I would welcome the opportunity to bring this perspective to your design team.

Habitats is a full service firm offering: landscape architecture, ecologically sensitive building design, and construction for buildings, landscapes and habitat restoration. Our designs explore the aesthetic possibilities of a healthy environment revealing the lasting benefits of ecological design. Every design decision is evaluated as to impacts on the local environment and its inhabitants. We promote the use of materials and resources that are: non-toxic, recycled, durable, local, low maintenance, native (plants and materials) and socially responsible.

The Northwest EcoBuilding Guild
wants to thank our great Sponsors
of the 2009 Green Pages
for their contributions

Not a Member?
You Can Join Online Today at www.ecobuilding.org.

Complete benefit information can be found online at ecobuilding.org/membership/benefits.

You can **find information** about Joining the Guild Online, and other important information about your Guild membership forms at www.ecobuilding.org/about_us/faq.

If joining as at a Professional Membership level, Complete the Process and Set up your Green Pages Listing. Check out the information page at www.ecobuilding.org/membership/setup. Start promoting your company online, today!

Members can *renew online*. See www.ecobuilding.org/membership/renew for more information.

Business Categories can be found online at www.ecobuilding.org/green_pages.

Membership Levels are:

Student Level—\$25

Includes access to Members-Only Section of the Guild's Web site, discounts to Guild events and other discounts.

Homeowner/Friend of the Guild Level—\$45

Includes access to Members-Only Section of the Guild's Web site, discounts to Guild events and other discounts.

Basic Professional—\$80

Same Benefits as Basic Non-Professional membership plus an online listing in the Online Green Pages under **one** business category.

Small Business (under 10 employees) —\$215

Same benefits as Basic Professional membership plus:

- A 75-word description for a primary category and **two** cross-reference categories in the Online Green Pages.

Large Business (11 to 100 employees) —\$450

Same benefits as Small Business membership plus:

- Your Online Green Pages Directory listing will feature additional business category cross-references (for a total of five).

Corporation — \$650

Same as benefits Large Business membership plus:

- Your Online Green Pages Directory listing will feature additional business category cross-references (for a total of seven).

If you have any questions, email the Membership Coordinator at membership@ecobuilding.org or by mail at

Northwest EcoBuilding Guild
PO Box 58530
Seattle, WA 98138-1530

Thank You, Guild ...

I am very excited to be part of The Northwest EcoBuilding Guild, it is inclusive, informative, and friendly.

It has a holistic approach, that welcomes all types of people, similar to having open borders, a global concept resulting in optimum information exchange for speedy global recovery. Thank you for existing.

KHS Architecture, Kristina Hestenes Stimson, A.I.A.

In Memory of Chris Stafford

Chris Stafford's Artist Statement

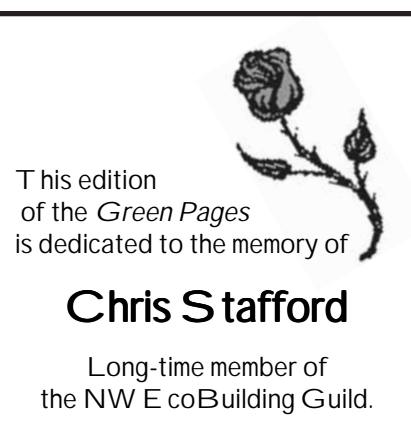

By discovering new ways of seeing everyday things my work reveals the beauty in what would often be overlooked.

Whether honoring the simplicity found in the flight of a heron or commuters waiting for the subway, each moment carries a unique whisper of the divine.

It is my intention to remind us that we are surrounded by this beauty at all times; we need only open our eyes to recognize it.

Christopher Stafford - 2006

The artwork opposite is
an original by Chris Stafford.

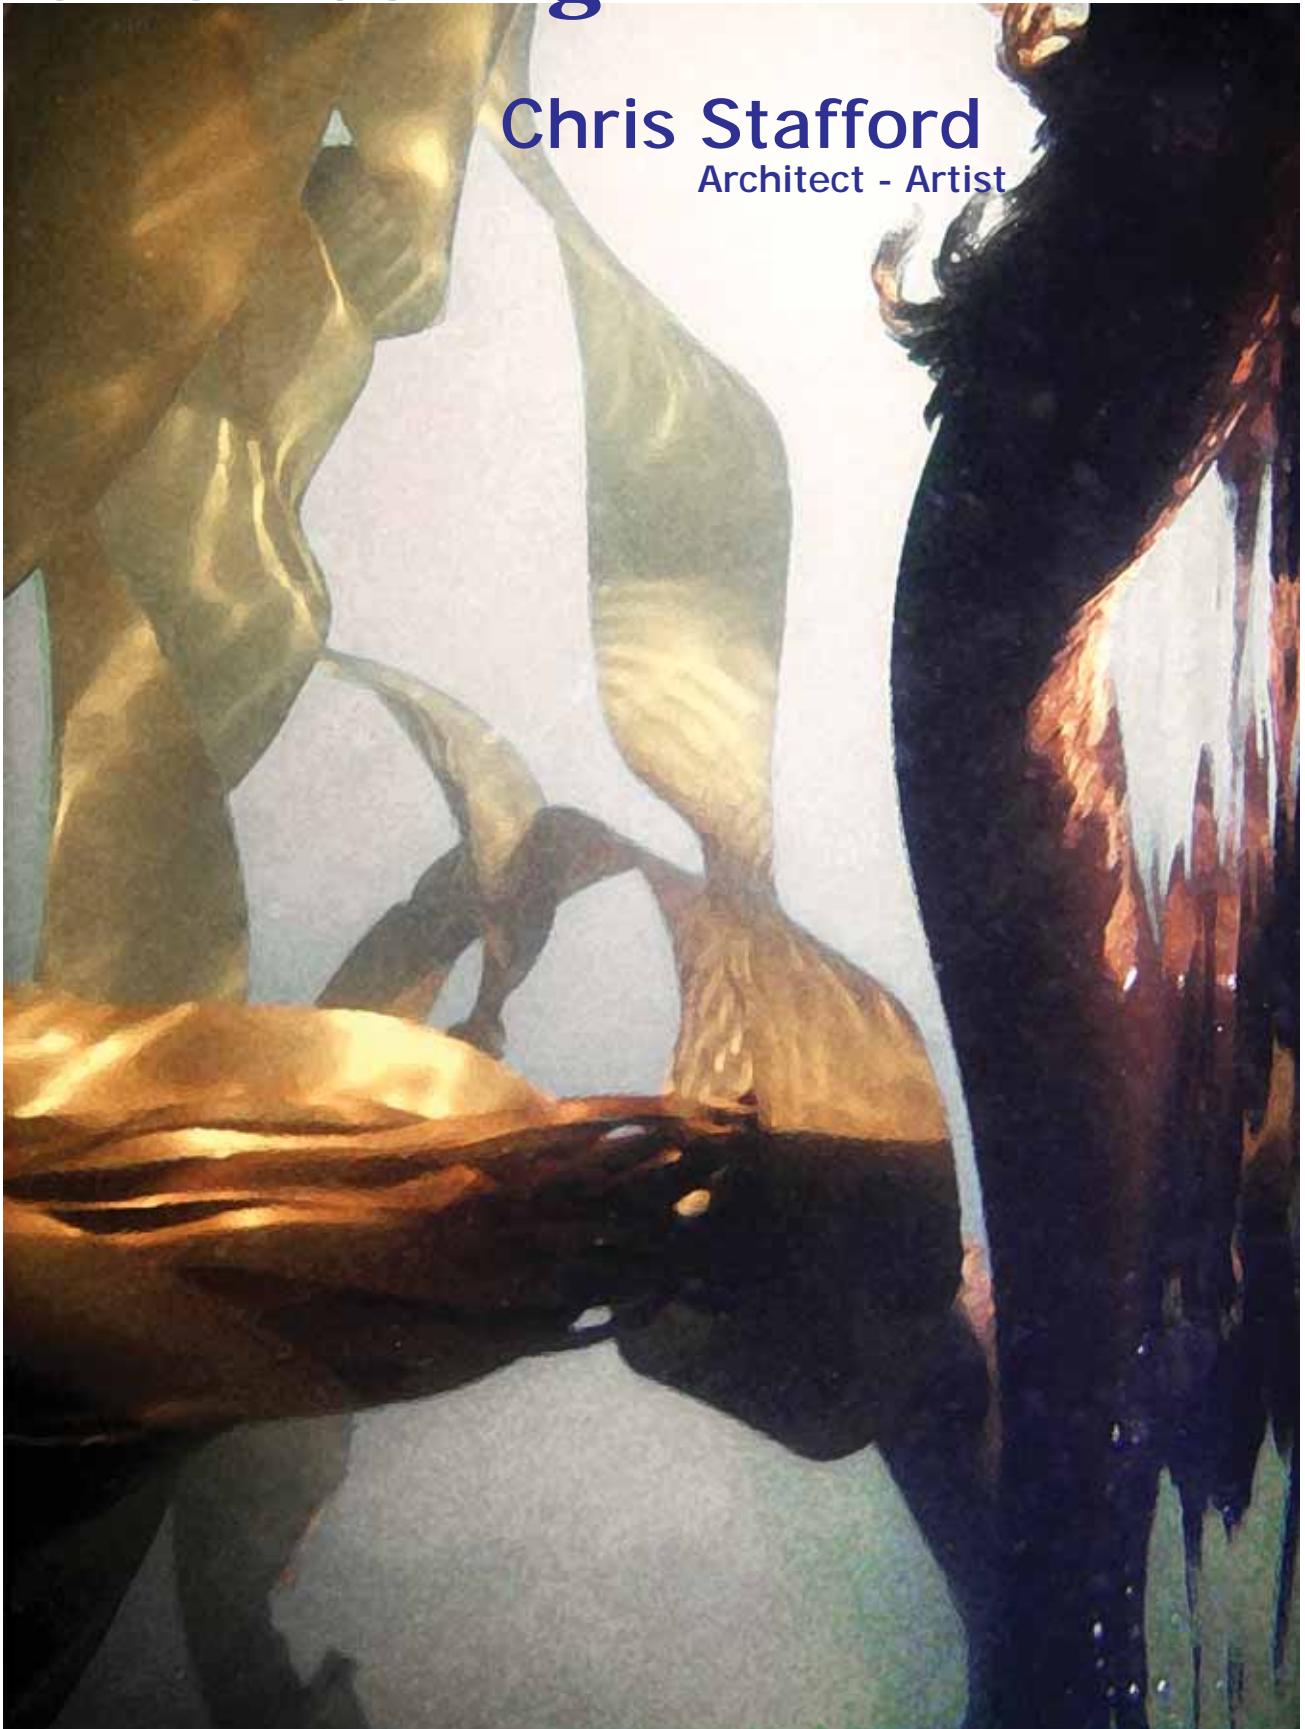

It is with somber joy we recall the life of Chris Stafford, who passed away last summer. Chris was one of the founders of the NW EcoBuilding Guild.

This page was supported by friends and colleagues of Chris, who celebrate his life, work, and commitment to creating a sustainable life in the Northwest.

2009 Guild Retreat

Mark your calendars!
The Northwest EcoBuilding Guild
Member's Education Retreat
will be October 24 & 25, 2009

Located on the Kitsap Peninsula
in Western Washington,

Pilgrim Firs Conference Center
includes 60 acres of forest
with nature trails surrounding
a beautiful 7-acre lake.

Pilgrim Firs is a peaceful,
friendly place. There are quiet areas
for solitude, cozy areas
for small group meetings,
and wide open spaces
to enjoy a large group indoors,
outdoors, or on the lake.
And the food is really good!

To help plan the program
